The SmartRail WE 001 and SmartRail WE 002 have been specifically developed for use on Wesemann media channels with functional slots. As an extension of the SmartRail WE 001, the SmartRail WE 002 includes an additional rotary lock to enable stable mounting on the front functional slot of the media channels. The construction consists of a black anodised aluminium slot rail with side brackets made of PA12 and stainless steel, featuring a practical snap-in function to ensure secure attachment to the front functional slot of the media channels.

The versatile SmartRail allows flexible placement options within the laboratory. A larger number of SmartRails provides multiple possibilities for module placement and enables the individual adaptation of the laboratory environment to specific requirements. All Better Basics modules are fully compatible with the SmartRail.

SmartEdge elite WE 001 in a Wesemann Delta 30 fume hood

SmartEdge

Solutions for the fume hood

The SmartEdge elite WE 001 for Wesemann Delta 30 fume hoods consists of two stainless-steel L-profiles, which are mounted on the left and right onto the stand receptacles inside the fume hood. Depending on the width of the fume hood, a variable number of slot rails can be flexibly inserted into these L-profiles. This creates additional storage space and a stable, adaptable organisational base that ensures laboratory materials are safely, conveniently, and clearly arranged within the fume hood. A larger number of slot rails provides multiple options for module placement and enables the individual adaptation of the laboratory environment to specific requirements. All Better Basics modules are fully compatible with the SmartEdge.

The SmartFrame elite WE 001 and WE 002 have been developed for use in the Wesemann Delta 30 laboratory fume hood. They consist of a brushed stainless-steel frame with integrated slot rails.

Every third slot rail mount on both sides of the SmartFrame elite features a recessed front section, which facilitates the precise horizontal alignment of the slot rails. All Better Basics modules are fully compatible with the SmartFrame.

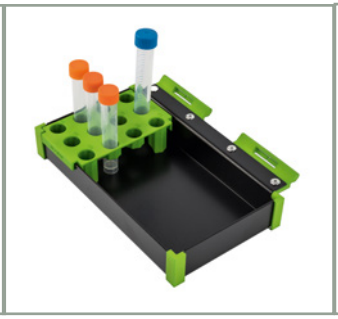
Over 100 modules

One system for endless possibilities to optimise every workplace and workflow



All Better Basics modules that can be directly mounted onto slot rails feature an integrated click mechanism, providing users with tactile feedback when positioning the holding modules within the slot rail. Since all holding modules can be freely positioned along a slot rail, you have complete flexibility in arranging them to suit your specific workflow. Once clicked into place, the modules remain securely positioned, even when the slot rail itself is moved to another working level. This ensures that both you and your work are protected against sample loss and workplace accidents.
